

To Whom It May Concern:

AGRO Merchants Group was founded in January 2013. Along with its financial partner, Oaktree Capital Management, AGRO Merchants currently owns and operates over 6.7 million cubic meters of temperature-controlled warehouse and distribution space worldwide.

Our cold storage operations require an immense amount of both energy, and water to maintain temperature. As such, we are always seeking ways to reduce these operating expenses.

Keeping track of the rate tariffs, programs, benefits, and incentives offered by our many utilities nationwide is difficult because it is an ever-changing landscape. Furthermore, even when we did identify something we felt we should be taking advantage of, working through the paperwork and process was a time consuming and costly endeavor.

After we engaged Util Auditors they made recommendations quickly, and beyond that, they successfully implemented the measures by helping us to navigate the red tape with the utility.

We have enjoyed the experience of working with the team at Util Auditors, and the cost savings implemented has been significant. I would recommend their services to any cost-conscious organization.

Sincerely Yours,
